

Repair it. Yourself!

NEW:

Stone Chip Repair Kit

Stone chips in the paint of bonnet and front bumper cannot be avoided, especially when travelling highways.

The darker the color of the paint the uglier the white stone chips appear.

Deeper stone chips going through the paint job down to the metal can lead to corrosion.

Repainting a whole bonnet is expensive and time consuming.

Thanks to the QUIXX Paint Stone Chip Repair-Kit ugly chips and small spillings in the paint of your car-front will be gone in no time.

This product helps avoiding expensive repairs at car-paint shops and supports retention of value by a simple DIY solution.
