

A top-down view of a car's undercarriage. A mechanic in a blue shirt is working on the exhaust system. A large, cylindrical, metallic electronic exhaust component is being installed. The car's chassis and suspension parts are visible. The text 'THOR ELECTRONIC EXHAUST' is overlaid on the left side of the image.

THOR ELECTRONIC EXHAUST

ELECTRONIC EXHAUST HAS GOT ITS NAME AND THIS NAME IS — THOR

Your diesel or gasoline engine doesn't sound like a real sports car? Do you want to hear the roar of an 8-cylinder engine?

We introduce a revolutionary electronic exhaust system called THOR — just one metal-encased superpowerful loudspeaker and a mobile application will turn your vehicle into a legendary sports car. You will be the owner of a new car every new day!

AVAILABLE SOUNDS

A team of programmers, engineers, mechanics and sound engineers updates THOR database each month. All sounds are recorded using legendary "live" engines. The main focus of THOR team`s work is an ultimately accurate and realistic imitation of the way each exhaust system sounds.

MERCEDES BENZ C63

BMW M4

AUDI R8

AUDI RS7

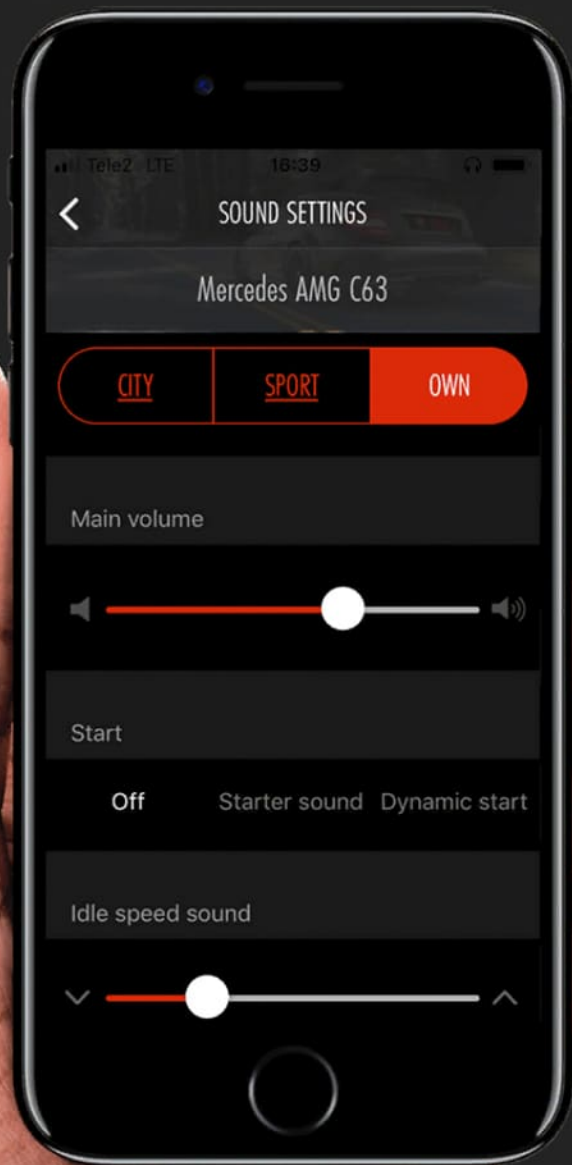

OPERATE

Download THOR App at App Store or Google Play. Now you have a huge car fleet with dozens of world car-making industry masterpieces in your hands. You can listen and buy any exhaust system represented as an audio track, and integrate it into your car directly from your smartphone.

SET UP

You can select, download, test and install a “new exhaust sound” online by using Thor App and Bluetooth. Adjust volume, tone of idling run/driving stroke of your engine, level of engine operation fluctuation, number of shooting and tone of high-speed governor to create your own unique sound.

SWITCH

Switch downloaded tracks on the move without distracting from the road. Your safety is our top priority, so in addition to mobile app, we have added a feature to operate the Thor exhaust system by using standard car buttons.

INSTALLATION EXAMPLE – BMW 530D G30 AS M5

If you want to convert a civil car into its sports version then all specs should be taken into account. And exhaust sound is not an exception. Especially if it is a diesel engine. The only way to get a loud bass sound for your car`s engine is to install THOR electronic exhaust system. Two structures mounted on both left and right side underneath the rear bumper will create the desired effect. You will feel pleasure each time you press accelerator pedal. Upgrade your car together with THOR.

ABOUT THE SYSTEM

THOR represents one or two superpowerful loudspeakers housed in spheroidal structures made of titanium-steel alloy. The system is suitable for absolutely any modern car. You will only need CAN-bus of your car`s engine to install THOR system. It is CAN-bus via which a complete synchronization of electronic exhaust system and your engine operation is performed. Installation warranty is two years. Service life of the device is unlimited.

The device was developed in Germany, made in Russia.

CHOOSE A DEVICE

1 LOUDSPEAKER

-35db sound is similar to the sound of
BMW M3 exhaust system

2 LOUDSPEAKER

-50db sound is similar to the sound of
Mercedes AMG C63 exhaust system

SYSTEM INSTALLATION

1

Install speaker acoustic system at the car bottom

2

Connect THOR electronic control unit to CAN and ACC circuits

3

Connect system components

4

Install THOR app. The system is ready for operation.

ADVANTAGES

Maximum volume and similarity of sound

Over 20 legendary sport car sounds

Custom settings: volume, pops, dynamic start etc.

Convenient mobile app

New engine sounds every month

Does not void car warranty

Service life over 10 years

Suitable for any car from model year 2005

Can be reinstalled on another car

Easy mounting
